

Product Description

Style:50 Mile

AK1980 Super Thin TV Antenna

1. Receives free High Definition TV broadcast signals (such as ABC, CBS, NBC, Fox, The CW, and PBS). Supports 1080p HD.
2. Can be easily hidden from view behind a picture, bookshelf or television.
3. Fast setup in 3 easy steps – Unwrap, Plug in, and Scan channels.
4. Easy to place high on a window or wall or flat on a table for great reception to watch crystal clear HD shows! You may also use the AK1980 TV antenna stand for tabletop placement.

Remarks:

1. If you are using a flat screen HDTV, please check your TV's manual to make sure your TV has a built-in tuner for receiving over-the-air broadcasts.
2. You should retune your TV and digital box from time to time to ensure you are receiving all available services. Retuning takes only a few minutes and can be done with your remote control.
3. Make sure your tuner can receive HD signals, otherwise you won't be able to receive and watch HD channels.
4. Signal quality determines how many channels you can receive as well as picture quality. Once you receive the antenna, hook it up to your TV, and try moving it around your home to find the placement with the best signal. You might be surprised how many HD channels you can receive!
5. All of our antennas have a 12 months warranty. If you are not satisfied with the amount of channels you are receiving, please contact us so we may immediately assist you and help to solve any problems you have.

FREE FOR LIFE - Never Pay Your Cable or Satellite For Television Again! AK1980 antenna can pull in all of your local news, weather, sitcoms, kids and sports programs absolutely FREE. Just connect it to your television and let the antenna do all the work.

Slim and High Performance - Extremely soft design and lightweight. You can hide it behind the TV, lay flat on table; stick it high on window (stand moisture weather or exposed to sunshine). It'll pull in hundreds of crystal clear digital & HD shows!

10FT LONG CABLE - Makes it easier for you to place it in your house to get the best reception, especially for customers whose televisions are quite far away from windows.

WHAT WE CARE – Our biggest concern isn't with earnings or profits; It's with customers'experiences purchasing and using our products. We want satisfied customers and to

develop trust in the AK1980 brand. Simply contact us if you have issues with your antenna.

As with any antenna, you may find many variables contribute to your antenna's performance. If your antenna is not working as expected, try one of the following:

1.) Check the antenna is correctly connected to your HDTV or 3rd party HD receiver.

2.) Set the mode to Antenna or Air in the TV's setup menu and re-scan for channels.

3.) Antenna signal strength can vary depending on distance from the tower, terrain, and weather. If needed, reposition the antenna in a different location. It is best to place the antenna in line of sight with the TV tower(s) and avoid obstructions. Always re-scan for channels after moving the antenna.

) This is an amplified antenna; If a signal cannot be received with the external amplifier, remove the amplifier and try again. In some instances, the amplifier may cause self-oscillation, which may interfere with the signal.
